LEAKAGE TEST (FOR SERVICE ENGINEERS IN THE U.S.A)

Before returning the unit to the user, perform the following safety checks:

1. Inspect all lead dress to make certain that leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the unit.
2. Be sure that any protective devices such as nonmetallic control knobs, insulating fishpapers, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacity networks, mechanical insulators, etc. which were removed for servicing are properly reinstalled.
3. Be sure that no shock hazard exists; check for leakage current using Simpson Model 229 Leakage Tester, standard equipment item No. 21641, RCA Model WT540A or use alternate method as follows: Plug the power cord directly into a 120-volt AC receptacle (do not use an Isolation Transformer for this test). Using two clip leads, connect a 1500 Ohm, 10-watt resistor paralleled by a 0.15 μ F capacitor, in series with all exposed metal cabinet parts and a known earth ground, such as a water pipe or conduit. Use a VTVM or VOM with 1000 Ohms per volt, or higher sensitivity to measure the AC voltage drop across the resistor. (See Diagram.) Move the resistor connection to each exposed metal part having a return path to the chassis (antenna, metal, cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor. (This test should be performed with the power switch in both the On and Off positions.)

A reading of 0.35 volt RMS or more is excessive and indicates a potential shock hazard which must be corrected before returning the unit to the owner.

POWER CORD REPLACEMENT (FOR SERVICE ENGINEERS OTHER THAN NORTH AMERICA)

In order to prevent fire or shock hazard when replacing the power cord, follow the procedure below to replace the parts with the standard supply parts.

CONTROLS AND FUNCTIONS

1 POWER Switch

Press this switch to turn the unit "On". Pressing it again will turn the unit off. While it is in the "On" position, the remote control can switch the unit between the "On" and "Standby" modes. The remote control is inactive when this switch is "Off". Note that this unit will draw a small amount of power when this switch is "Off".

2 POWER Indicator

With the power switch is in the "On" position, this indicator is illuminated in green when the unit is "On", and is illuminated in amber when the unit is in "Standby". This indicator will not illuminate when the power switch is "Off".

3 HEADPHONES Jack

Stereo headphones with a standard 1/4 inch plug can be connected to this jack. When the *SPEAKERS* switches are in the *Off* position, sound can still be obtained via the headphone jack.

4 BASS Control Knob

This knob controls the low frequency sound level. Turn it clockwise to boost or counterclockwise to reduce the low frequency sound level.

5 Tone Defeat Switch

This switch is used to make the frequency characteristic flat by internally bypassing the tone control circuitry. Set this switch to the OFF position (button out) when you want to use the tone control knobs.

6 TREBLE Control Knob

This knob controls the high frequency sound level. Turn it clockwise to boost or counterclockwise to reduce the high frequency sound level.

7 BALANCE Control Knob

This knob is used to balance the left and the right channels. Usually, it is set at the center. Turn it to the left or right to balance the sound if it seems unbalanced from the speakers or the headphones.

8 SPEAKERS switches

Press "1" to activate speaker system 1. Press "2" to activate speaker system 2. Press both "1" and "2" to activate both speaker systems. Release both "1" and "2" to listen to only to headphones.

9 Phase Correct Loudness Switch

This switch activates a unique low frequency equalization circuit that provides full, natural sound from small speakers that are normally deficient in the bass region. It can also be used in place of conventional loudness compensation.

10 Subsonic Filter Switch

When playing the turntable, this filter switch is used to reduce subsonic frequencies, which may excessively vibrate the speaker cones or turntable and cause feedback.

11 Mono Switch

This switch is used to combine the left and right channels and create a mono signal.

12 TAPE MONITOR Selector

This selector is used when playing a tape deck, or monitoring during recording.

Tape 1 : Select this position to play a cassette tape, or to monitor during recording on the tape deck connected to the TAPE 1 jacks.

Source : Select this position to listen to a program source other than a cassette tape.

Tape 2 : Select this position to play a cassette tape, or to monitor during recording on the tape deck connected to the TAPE 2 jacks.

13 RECORD OUT Selector

This selector is used for recording from another input on the tape deck(s) connected to the TAPE 1 and/or TAPE 2 jacks, for dubbing between two tape decks, or for recording another source independent of the *SOURCE* selector.

Tuner : In this position, the tuner signal is available at the TAPE 1 and TAPE 2 OUTPUT jacks regardless of the position of the *SOURCE* selector. This permits recording the tuner signal on the tape deck(s) connected to TAPE 1 and/or TAPE 2 jacks while using the preamplifier and power amplifier sections in another mode (Phono, CD or other sources, for example).

Source : Select this position to record the program source selected by the *SOURCE* selector in either or both of the two tape decks connected to the TAPE 1 and TAPE 2 jacks.

Off : Select this position to prevent the degradation of quality when recording function is not operated.

Copy 1 → 2 : Select this position to duplicate the cassette tape in the deck connected to the TAPE 1 jacks onto the tape in the deck connected to the TAPE 2 jacks.

Copy 2 → 1 : Select this position to duplicate the cassette tape in the deck connected to the TAPE 2 jacks onto the tape in the deck connected to the TAPE 1 jacks.

14 SOURCE Selector

This selector is used to select a program source other than a tape.

AUX : Select this position to listen to the sound from a component connected to the AUX jacks.

Video : Select this position to playback the audio signal from an audio/video component such as a camcorder, video player, or TV tuner connected to the VIDEO jacks.

CD : Select this position to listen to the sound from the compact disc player connected to the CD jacks.

Tuner : Select this position to listen to an FM or AM broadcast from the stereo tuner connected to the TUNER jacks.

Phono : Select this position to listen to a disc played on the turntable connected to the PHONO MM or MC jacks.

15 VOLUME Control Knob

This knob controls the sound level. Turning clockwise increases the sound volume, and turning counterclockwise decreases it. Set this knob at a minimum level before turning the power on or changing the sound source to protect the speakers from being damaged by a sudden high level sound.

16 Cartridge Selector

This switch selects the gain and input impedance of the phono input circuitry to match the type of phono cartridge used. Be sure to connect the turntable to the appropriate PHONO input jacks (MM for moving magnet type cartridges and MC for moving coil type cartridges), and to select that input with this selector switch.

REMOTE CONTROL SYSTEM

Using the remote control - The system remote control can switch the amplifier's power status between "on" and "standby". The amplifier's power switch must be manually set in the "on" position in order for the remote control to function.

The volume up and down buttons control the position of the amplifier's volume control knob.

In addition to this amplifier, this system remote control can operate many basic functions on the following Harman Kardon tuners, CD players and cassette decks:

HD7450	HD7600II	TD4200*	TD4800	TU9200*
HD7500	TL8500	TD4400*	DC5300*	TU9400
HD7500II	TL8600	TD4500	DC5500	TU9600
HD7600		TD4600	DC5700	

Please refer to the owner's manual for each unit for operating instructions.

* These units must be connected to the amplifier's remote control units output jacks so that the system remote control can operate them.

Pin No.	Pin Name	I/O	Function
1	D3	I/O	9-bit terminal having output function on an independent bit basis. Output is open drain circuit for N channel transistor. Port D0 to D3 terminals have 4-bit input function. Programming output latch to "1" sets the output to floating (high impedance) state so that the terminals may be used as input port.
